DESIGN COMPILER LAB WEEK 1

Name-Lehar sancheti Roll no-Ap19110010448 Date-30-07-2021

Program 1:

Implement a language recogniser which accepts set of all strings over the alphabet

 Σ ={a,b} containing an even number of a's and an even number of b's. Description:

The acceptable strings of the language are ϵ (Null string), aa, bb, abba, babbab etc.

Deterministic Finite Automata for the given language is given below:

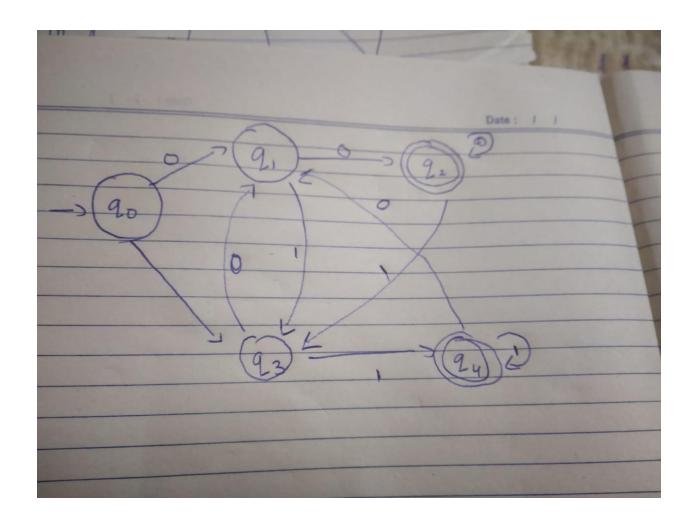

DFA M=(Q, \sum , δ ,Q0,F) Where Q=Set of all states ={Q0,Q1,Q2,Q3} \sum =Input Alphabet={a,b}, Start state is Q0 F=Set of all final States={ Q0} And the transitions are defined in the transition diagram

C Code

```
#include<stdio.h>
void main(){
int state=0,i=0;
char current,input[20];
printf("Enter input string \t :");
scanf("%s",input);
while((current=input[i++])!='\0'){
switch(state)
case 0: if(current=='a')
state=1;
else if(current=='b')
state=2;
else
printf("Invalid token");
exit(0);
}
break;
case 1: if(current=='a')
state=0;
else if(current=='b')
state=3;
else
printf("Invalid token");
exit(0);
}
break;
case 2: if(current=='a')
state=3;
else if(current=='b')
state=0;
else
printf("Invalid token");
exit(0);
}
break;
case 3: if(current=='a')
state=2;
else if(current=='b')
state=1;
else
printf("Invalid token");
```

```
exit(0);
}
break;
}
if(state==0)
printf("\n\nString accepted\n\n");
else
printf("\n\nString not accepted\n\n");
}
```

Program 2-Implementation of Language recognizer for set of all strings ending with two symbols of same type.

Description:

The acceptable strings of the language are ϵ (Null string), aa, bb, aaaaabbbb, babbabb etc.

Non Acceptable String are aaaaaaaba bbbbbbbaba abababab etc Deterministic Finite Automata for the given language is given above:

DFA $M=(Q, \sum, \delta, Q0, F)$ Where

Q=Set of all states ={Q0,Q1,Q2,Q3,Q4}

∑=Input Alphabet={a,b},

Start state is Q0

F=Set of all final States={ Q2,Q4}

And the transitions are defined in

the transition diagram

C CODE

```
#include <stdio.h>
#include<stdlib.h>
int main()
int state=0,i=0;
char current,input[20];
printf("Enter input string \t :");
scanf("%s",input);
while((current=input[i++])!='\0'){
  switch(state)
     case 0:if(current=='a')
           state=1;
           else if(current=='b')
           state=3;
           else
          { {printf("%d",current);
             printf("Invalid token");
          exit(0);
             break;
      case 1:if(current=='a')
          state=2;
           else if(current=='b')
          state=3;
           else
          { printf("Invalid token");
          exit(0);
             }
             break;
```

```
case 2:if(current=='a')
           state=2;
           else if(current=='b')
           state=3;
           else
          { printf("Invalid token");
          exit(0);
             }
             break;
        case 3:if(current=='a')
           state=1;
           else if(current=='b')
           state=4;
           else
          { printf("Invalid token");
          exit(0);
             }
             break;
        case 4:if(current=='a')
           state=1;
           else if(current=='b')
           state=4;
           else
          { printf("Invalid token");
          exit(0);
             }
}
if(state==2||state==4)
printf("\n\nString accepted\n\n");
else
printf("\n\nString not accepted\n\n");
```

}
